

When I started with this noble sport,  
I became disillusioned with my results.  
I knew I had to take drastic measures if I wanted to compete.  
After careful consideration I identified Alfons Klaas as one of the leading fanciers worldwide and imported the base of my birds directly from him.

When Purdey won the averages and came equally third in the SAMDPR in 2013 I had the opportunity to breed of her.

Her offspring produced magnificent results and bred brilliantly as well, o.a. 1st and 3rd in the expensive rings, won the prestigious 2 Yr old championship in the combine and various other top positions.

If you study Alfon's results in general and Purdey's in particular, you should not hesitate to get hold of this sales's world class genetics

As I am an Agriculturalist and my interest lies in genetics, I collected this 31 birds with of the best possible genetics available.

The research into this collection's potential is beyond reproach and any and all of these birds should make a huge difference to most lofts.
